Coordination Information

**MATH-UA 123 Calculus III** is coordinated with a departmental syllabus and common exam. The coordinator for Calculus III in Spring 2018 is Prof. Charmaine Sia (charmaine.sia@nyu.edu).

**MATH-UA 129 Honors Calculus III** (this course) does follow the coordinated syllabus. The textbook, assignments, and exams are different.

Section Syllabus

This is the syllabus for MATH-UA 129 Honors Calculus III, Section 001, Spring 2019.

Topics

- geometry of space
- calculus of vector-valued functions
- calculus of functions of several variables
- vector calculus

Instructor

Prof. Matthew Leingang, CIWW (Warren Weaver Hall) 718. If you have been to my office before, please note that I have moved down the hall as of August 2018.

My office hours are Wednesdays and Thursdays, 1:30–2:30pm. In the event that I will need to move or cancel my office hours I will announce it.

My email address is leingang@nyu.edu. Feel free to friend me on Facebook or follow me on Twitter or Instagram.

Class

Class meets MW 8:55–10:45am in Warren Weaver Hall 512.

Assessment

Homework

There will be no WebAssign in this section. Each section of the textbook that we cover will have a practice problem set, consisting of odd-numbered problems. The problems will not be collected nor graded; the solutions to all odd-numbered problems are in the back of the textbook. Practice problems are a good way to make sure you understand the major topics of the section. The Piazza boards are a good place to discuss problems.

There will be weekly written homework assignments. Weekly written assignments are due Fridays at 12:00noon, but cover the previous week’s worth of material. So you will have a full week to do them; the sooner you start the better your chance of success. Your written homework will be uploaded to Gradescope
and will be graded by a human grader. For full credit on written homework, your answers must be explained in complete English (and mathematical) sentences. See the departmental website for the complete rubric.

**Quizzes**

There will be a quiz each Tuesday. Quizzes take place at the beginning of class and will last 20 minutes. The topics for each quiz are listed on the calendar. With a few exceptions, it's whatever we did the week before.

**Exams**

There will be two midterm exams, one on March 14 and one on April 18. These will take place in class and last the entire class period.

*The final exam is cumulative* and will be on **Monday, May 20, at 8:00am**.

**Participation**

There are two components to participation measured in this class.

- *Attendance* (50%): I will take attendance daily. Late arrivals count 2/3 as much as presence at the beginning of class. Documented absences may be excused.
- *Engagement* in class (50%): this will be measured by asking and answering questions (in class and online), working on class exercises, and participating in group discussions, and presenting problems on the board. *Distraction of the electronic variety can negatively impact your score here.*

Scores will be taken using the following rubric:

<table>
<thead>
<tr>
<th>Points</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Listens attentively and is focused on classroom activity. Asks and answers questions. Contributes meaningfully to group discussions. Presents worked out problems at the board.</td>
</tr>
<tr>
<td>3</td>
<td>Listens attentively and is focused on classroom activity. Participates in group discussions.</td>
</tr>
<tr>
<td>1</td>
<td>Listens and is partially focused on classroom activity. Distracted by other course work, social media, or electronic conversations. Does individual work during group discussion time.</td>
</tr>
<tr>
<td>0</td>
<td>Is not at all focused on classroom activity. Does not participate at all in group discussion. Absent or asleep.</td>
</tr>
</tbody>
</table>

**Grades**

The items above will be averaged with the following weights:

<table>
<thead>
<tr>
<th>Item</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Midterms</td>
<td>40%</td>
</tr>
<tr>
<td>Weekly Homework</td>
<td>10%</td>
</tr>
<tr>
<td>Quizzes</td>
<td>10%</td>
</tr>
<tr>
<td>Participation</td>
<td>10%</td>
</tr>
<tr>
<td>Final Exam</td>
<td>30%</td>
</tr>
</tbody>
</table>

We will then convert these numbers to letters based on the departmental scale:
As for a “curve”, these cutoffs may be adjusted in the downward direction (creating more higher grades) to bring the grade distribution in line with departmental norms.

**Conclusion**

We hope you enjoy the class! Please read "The Fine Print", below, for more information, as well as the other pages on this section website and the departmental course website.

**Textbook**

The textbook for Honors Calculus III is *Vector Calculus* (6th edition) by Marsden and Tromba. The ISBN is 978-1429215084. It is available at the NYU Bookstore and countless others.

If you're looking for optional texts for extra perspective, here are two:

- *Essential Calculus* by James Stewart. This is the text for MATH-UA 123 Calculus III
- *Calculus III* by Marsden and Weinstein (same Marsden). The link takes you to the Library page, from which you can access the entire text online.

You may want to get a reference book for single variable calculus as well. There are lots available in the NYU Library system too. Here are a few:

- *Calculus II* by Marsden and Weinstein
- *Calculus I* by Marsden and Weinstein
- *Calculus Problems* by Baronti, de Mari, et al.

**DRAFT - CoCalc**

We are also using the CoCalc online platform for some in-class demonstrations and assignment management. You will get an email about your CoCalc account before the semester begins. CoCalc accounts are free forever, but the university is paying for a semester-long premium upgrade in speed and access.

**LaTeX**

Assignments must be typed in the LaTeX document preparation system. The problems will be distributed through Overleaf as LaTeX documents; the easiest option is to copy the project to your own account, then edit
Homework Rubric

Mathematical writing is one of the course goals. Homework will be evaluated using the following rubric:

<table>
<thead>
<tr>
<th>Elements</th>
<th>Competent</th>
<th>Approaches Competency</th>
<th>Beginning Competency</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.1. Conceptualization:</td>
<td>Accurately identifies/extracts relevant information</td>
<td>Shows only a partial understanding of relevant information</td>
<td>Draws incorrect conclusions about information presented</td>
</tr>
<tr>
<td>Finds the necessary information</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A.2. Conceptualization:</td>
<td>Determines an appropriate strategy that can be used to solve the problem</td>
<td>Provides an appropriate but incomplete strategy that can be used to solve the problem</td>
<td>Is unable to identify an appropriate strategy that can be used to solve the problem</td>
</tr>
<tr>
<td>Makes a plan to solve the problem.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.1. Computation:</td>
<td>A sequence of clearly logical and correct steps is performed to apply the strategy</td>
<td>Methods attempted are either unsuccessful or represent only a portion of the calculations required to comprehensively solve the problem</td>
<td>Methods attempted are both unsuccessful and not comprehensive.</td>
</tr>
<tr>
<td>Performs the Calculation or Analysis</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.2. Computation:</td>
<td>Makes competent judgments, drawing reasonable and appropriately qualified conclusions for this work.</td>
<td>Draws plausible conclusions, which may be inaccurate.</td>
<td>Draws implausible conclusions.</td>
</tr>
<tr>
<td>Checks The Answer For Accuracy</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.1. Communication:</td>
<td>Clearly explains the steps taken in the process, using appropriate terminology.</td>
<td>Explains most of the steps taken in the process, using sometimes inappropriate terminology.</td>
<td>Attempts to explain the steps taken in process, but is not thorough and uses inappropriate terminology.</td>
</tr>
<tr>
<td>Elements</td>
<td>Competent</td>
<td>Approaches Competency</td>
<td>Beginning Competency</td>
</tr>
<tr>
<td>----------------------------------</td>
<td>---------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>C.2. Communication: Articulates The Solution</td>
<td>Clearly articulates the solution to the problem using appropriate terminology. The presentation framework chosen is appropriate for the purpose and all symbols, diagrams, and illustrations are properly typeset and formatted. The layout is appropriate for ease of understanding.</td>
<td>Interpretation of findings does not indicate a clear understanding of the solution.</td>
<td>Hesitant or uncertain about drawing conclusions from this work.</td>
</tr>
<tr>
<td>C.3. Communication: Presents The Problem And Solution In An Organized, Clear, And Concise Manner.</td>
<td>The presentation framework chosen might be adequate for the purpose but not all symbols, diagrams, and illustrations are properly typeset and formatted. The layout makes it hard to follow.</td>
<td></td>
<td>The presentation framework chosen is inadequate for the purpose, not allowing for symbols, diagrams, and illustrations to be properly typeset and formatted. The presentation is hard or impossible to follow.</td>
</tr>
</tbody>
</table>

This is based on American Association of Colleges and Universities VALUE Rubric for Quantitative Literacy, and the [University of Rhode Island Mathematical, Statistical or Computational (MSC) Strategies rubric](https://www.uri.edu/math/assessment/rubrics/).

Each problem or part of problem will be scored on a 0-5 scale:

- **5 points** if the majority of evaluations are in the left column (Competent), and all three of C1, C2, and C3 are rated competent.
- **4 points** if the majority of evaluations are in the left column, some of C1, C2, and C3 are in the middle column, and none are in the right column. So the main difference between 4 and 5 is on the “communication” axis.
- **3 points** if the majority of evaluations are in the middle column, and none are in the right column.
- **2 points** if there are 1-2 evaluations in the right column
- **1 point** if there are 3 evaluations in the right column
- **0 points** if there are 4 or more in the right column.

**Gradescope**

Written homework will be collected and scored by a site called [Gradescope](https). I will sign you up for an account on that site. Read the [submitting homework guide](https://) and/or [watch the video](https://) for more information on how to upload your homework.

**Section Calendar**
The course calendar is posted in the "Calendar" tab and as an ICS feed: https://newclasses.nyu.edu/access/calendar/ical/83f16baf-dba1-455e-a8ef-dc1eb1cf5e2a.ics

- How to add to this feed to a Google calendar (like your NYU Google calendar)

**Piazza**

Discussion takes place on Piazza rather than on this course website.

**The Fine Print**

The following are minor and technical rules and policies that will not seem necessary at the beginning of the course. I do not like to dwell on them because they distract from my goal and yours, which is engaging in the course material as soon and as much as possible. However, you should read them and we will abide by them. Some of this may sound a little snarky, and I apologize in advance for that, but all of these issues happen enough that they should be addressed.

![Image](https://i.imgur.com/3.jpg)

**In class** Attendance and participation in class (including asking and answering questions) is expected and will count in your final grade. Electronic distractions during class such as texting, surfing the web, doing homework for another course, etc., are an impediment to participation and therefore can result in deductions from the participation grade. Your fellow students also find them extremely distracting. You may use electronic devices such as laptops, phones, and tablets only in connection with class content.

Falling asleep in class is also indicative of a lack of participation. If I catch you nodding off I'll probably wake you up gently at first. I understand that all students work hard and the class meets early in the morning. But if you are really unable to stay awake I may ask you to leave class and go back to bed.

**Homework, extensions, and drops** All homework assignments are published in advance of their due dates. The class calendar shows you the upcoming assignments and their due dates. You are responsible for turning in your homework on time.
Occasionally I will grant extensions on homework if you have other important assignments from other classes due at the same time. It helps to consider this, and ask for it, well in advance of the due date. “I forgot” is not an admissible reason to earn an extension. “I overslept” is not an admissible reason to earn an extension. “I didn’t realize there was an assignment” is also not an admissible reason to earn an extension.

I know that life happens. So in computing the final grade, we will drop:

- the lowest one (2) homework assignments
- the lowest two (2) quizzes

**Exams** Exams will contain a mixture of fixed-response (e.g., multiple-choice) and free-response questions.

The final is cumulative. The final is cumulative. The final is cumulative.

**Email** I try to answer all emails in a timely fashion (one business day), but I usually don’t read my work email between 4pm and 5am. Some nights I’ll be working but most evenings, nights, and weekends are family and sleep time for me. If you have a question about homework the best time to ask is office hours the day before, or by email the day before. You can also ask on the Piazza forum, which are active at all hours.

![Image](https://quickmeme.com/memes/28/35/283587.png)

*Before emailing me, please check if the question you are about to ask can be answered without asking me. I put a significant amount of information on the course website, such as what topics are covered on which days, what topics will be tested on upcoming quizzes and exams, and where the final exam will be held. Most of the*
information you can find within this document; if there are clarifications or updates I usually post them as announcements and email them to the class. I understand it’s quicker for you to ask than to seek, but not on my end. If you email me with a question that is clearly answerable by skimming the website, I might answer it, but I also may respond by telling you to look at the website, or I might ignore it altogether.

I get a lot of emails from a lot of people. To help me keep them organized, use the subject line to summarize the message. If you’re starting a new conversation, write a new email rather than replying to an old one. Email is not texting—my mail program sorts messages by conversation and if you change the subject it will be harder for me to find.

Use your NYU email address for email correspondence, not a person Gmail or Hotmail address. You should read your school email at least once a day as it’s my (as well as the rest of the University’s) official line of communication to you.

**Makeups** If you miss a quiz or test for medical reasons, inform me **before** the quiz/test that you will be seeking medical attention. Documentation must be provided. Quizzes and tests must be made up within one (1) university business day of the missed assessment, except in extreme emergency situations involving extended medical care. Otherwise, the quiz or test will be scored as zero (but eligible to be dropped).

**Retours and Regrades** Quizzes and tests will be scanned and returned via the File Drop feature on NYU Classes. I will keep the hard copies and destroy them at the end of the term. If you discover an arithmetic error in computation of your score (it happens), please let me know and I will correct the record. If you have a question about how a problem was scored, please ask and I can confer with the graders. Graders work with a rubric and consistency is the biggest concern. *The score on an assignment, quiz, or test is considered final five (5) university business days after it is returned.*

**Moses Center** If you need special accommodations as determined by the Moses Center, it is your responsibility to arrange for those accommodations a minimum of five (5) university business days before the exam. I prefer to administer out-of-sequence quizzes in my office and exams at the Moses Center. The Moses Center tends to fill up on days when many students have exams so the sooner the arrangements are made the better.

**Religious Holidays** If you need to miss class or turn in an assignment late in observance of a religious holiday please let me know in advance. I'm aware of most Christian and Jewish holidays but I sometimes forget when they occur. I'm less aware of Muslim or other holidays. I'll happily accommodate any of them.

**The curve** *No scores will be adjusted or "curved" during the semester.* I will let you know the average and standard deviation on each exam so you can measure yourself relative to the rest of the class. At the end of the semester, the letter grade cutoffs may be lowered in order to raise letter grades.

*I do not like talking about grades. I like talking about math.* No matter your current standing in the course, the best path to a higher grade is to learn the course material thoroughly, and I will be happy to help with that.

**Help** Office hours are a drop-in time to talk about any math issue. If you have a personal issue (or if my normal office hours conflict with your schedule) feel free to make a private appointment. For additional math help visit the Courant tutoring center on the 5th floor of Warren Weaver, or the University Learning Center. Before taking the drastic and expensive step of hiring a tutor, try to find a study group to work with regularly, and make sure you exhaust all available free resources. We don’t endorse any private tutor, and advertisement
on university property does not constitute departmental endorsement. Some tutors are good, but some can be scammy.

**Academic Integrity** All students are expected to abide by the CAS Honor Code to be found in the [Academic Policies](#) page, and should be familiar with the procedures for prosecuting it and the possible consequences. The following are considered violations of academic integrity (though there are others):

- Copying answers from Wolfram Alpha or another computational website to homework. You can use technology to check your work, but if you submit it without thought you are cheating yourself of the point of the exercise.
- Copying answers to homework problems from another website such as Yahoo! Answers, Chegg, etc., The graders can google as well as you can, and will be able to detect if you’ve copied your work. Aside from the integrity issue, students who short-circuit the homework process usually do not do well on quizzes and exams.
- Copying answers from another student’s paper during a quiz or exam
- Allowing your paper to be copied during a quiz or exam
- Arranging for another person to take a quiz or exam in your stead
- Altering graded work to raise scores
- Fabricating excuses or forging documentation for makeup exams

I would not list these if they had not been tried. Cheating is unfair to your fellow students, to me (I work very hard and take my job seriously, and am personally offended by cheating), and to yourself. Penalties can range from a zero on the assignment, quiz, or test, to an F in the course. Violations will also be reported to the Dean for Students, and can lead to probation, suspension, or expulsion.

Please also abide by the NYU policy on illegal downloading of copyrighted material: don't.
