

# Combinatorics

## Final Test

1. Prove the identity

$$\sum_{k=0}^n k \binom{n}{k} = n2^{n-1}.$$

2. 10 people are sitting at a round table. In how many different ways can we pick 3 of them so that no two sit next to each other?

3. Let  $T$  be a tree with  $x$  leaves and  $y$  vertices of degree at least 3. Show that  $y \leq x - 2$ .

4. Prove that if in a bipartite graph every vertex has degree at most  $k$ , then by adding vertices and edges we can obtain another bipartite graph, in which every vertex has degree precisely  $k$ .

5. What is the maximum number of edges that a graph of  $n$  vertices can have if it does not contain any triangle whose one vertex is connected to an extra (fourth) vertex?

Please explain all of your answers! Good luck! - J.P.
